

Component-Based Website — Yaad Spice Co.

Laboratory: Creation of a component-based website · Vite + React

The business idea

Yaad Spice Co. is a small-batch Jamaican spice shop with a single distinctive feature: customers **build their own jerk blend** instead of buying a fixed product. The visitor adds any of eight single-origin spices, sets the amount of each, and the interface recomputes the price and a live heat meter on every interaction. A configurator was chosen deliberately because it forces a real component architecture (reusable cards, props down, events up, derived state) rather than static content blocks.

How it was developed

The site is a single-page application built with **React** and bundled with **Vite**. Each part of the UI is an independent component in its own file. Application state (the blend) lives in the App orchestrator and flows downward as props; child components emit events back up to handlers, giving the one-direction data flow that defines a component-based system. Price, heat score and a Scoville read-out are **derived** from state, so the summary and heat meter stay in sync automatically. Styling uses a custom palette drawn from a jerk pan (charred background, a bonnet ember gradient that doubles as the heat meter, and a thyme-green counterpoint) with an Anton / Outfit / Space Mono type system. The project is deployed to GitHub Pages through a GitHub Actions workflow that builds and publishes on every push.

How it meets the assessment criteria

Criterion	Met by
1 — At least two components	Seven components: NavBar , Hero , SpiceCard , HeatMeter , BlendSummary , Footer , App . SpiceCard is reused once per spice via props + event callbacks; BlendSummary composes HeatMeter .
2 — Graphical interface	Custom branded UI: charred palette, ember heat gradient, responsive card grid, display/body/mono type system.
3 — More than two usability features	(1) sticky nav menu with smooth scroll · (2) color-coded heat pips + meter · (3) add / remove and – / + quantity buttons · (4) instant live price & heat feedback · (5) keyboard focus ring + ARIA labels · (6) responsive to mobile · (7) empty-state guidance and disabled order button · (8) reduced-motion support.

Link to the resulting web page
